Grand Total of Credits: 95

- The Dissertation will be allotted in III Semester and will be evaluated at the end of IV Semester. Students will be given a topic for the project related to the curriculum by his/her supervisor arranged for the project.
- **Visits:** Visits to forest operation sites, forest nursery, wildlife habitats and plantation sites will be conducted as per the requirement of curriculum.

Programme Outcome:

PO1: Fundamental knowledge: The students will be able to apply knowledge of Forestry and Environmental Sciences for managing the forest resources and its development.

PO2: Problem investigation and analysis: The students will have the competence to investigate, and possess analytical skills to identify, formulate and solve real time Forestry and Environmental issues and provide a cutting edge solution.

PO3: Society: The students will apply the knowledge of Forestry to assess the resources for the benefits and wellbeing of forest dwellers and society.

PO4: Ethics: The students will apply ethical principles and commit to professional ethics, responsibilities and norms of the forestry and environment protection, and conservation practice.

PO5: Team work: The students will function effectively as an individual member or as a leader in diverse teams and multidisciplinary activities

PO6: Communication: The students will be able to communicate effectively by presentations and writing reports of the activities related to forestry

PO7: Management: The students will be able to manage the forest resources for mitigating climate change and sustainable future.

PO8: Life-long learning: The students will be engaged in independent lifelong learning in the broadest context of forestry operation and management.

Program Specific Outcomes:

PSO1: Student will develop strong competencies in the field of Forestry and Environmental Sciences and its application in a technology-rich, interactive environment.

PSO2: Students will develop strong skills on silvicultural activities, forest genetics and tree breeding, forest survey & mapping, forest management planning, forest based industries, environmental sustainability using recent technologies and tools.

PSO3: To prepare the students for employment in Forestry, environmental sciences and allied sectors and to meet the workforce demand of government and industries.

SEMESTER-I

PAPER I. SILVICULTURE

CR.4 (3+1)

Course Objectives:

1. To develop understanding of student on the characteristics of various tree species and Forest classification of India.
2. To perform the regeneration survey, production techniques of tree species and their adaptations to different type of environments.

3. To acquire knowledge on forest operations required for sustainable forest management

Theory

Principles of Silviculture, objective and scope, relationship with the other branch, forest structure and its components. tree and the forest, Eco-physiology of tree growth, factors of the locality, bioclimate and microclimate effect, forest ecosystem concept, stand dynamics-forest succession, classification of world's forest vegetation, forest types and their distribution, Advanced and modern nursery tools & techniques, natural and artificial regeneration, Tending operation. Regeneration of important forest tree species (*Shorea robusta*, *Tectona grandis*, *Gmelina arborea*, *Eucalyptus spp.*, *Dalbergia sissoo*, *Bamboo spp.*, *Cedrus deodara* and *pinus roxburghii*), regeneration survey and techniques.

Practical

Acquaintance with various technical terms of silviculture. Study the forest composition. Recording the observations on shoot development, growth rings, crown development, leafing, flowering, and fruiting in (*Shorea robusta*, *Tectona grandis*, *Gmelina arborea*, *Eucalyptus spp.*, *Bamboo spp.*, *Cedrus deodara*, *Dalbergia sissoo*). Study of site factors like climatic, edaphic, physiographic and biotic. Study of natural regeneration, Afforestation and Reforestation success. Layout of nursery bed for sowing. Classification of world's forest vegetation.

Suggested Readings

- Dwivedi AP. 1992. *Agroforestry: Principles and Practices*. Oxford and IBH.
- Dwivedi AP. 1993. *A Text Book of Silviculture*. International Book Distributors, Dehradun.
- Khanna LS. 1996. *Principle and Practice of Silviculture*. International Book Distributors.
- Smith DM, Larson Be, Ketty MJ & Ashton PMS. 1997.
- Jha, L. K. 2014. *Advances in Agroforestry*, Today & Tomorrow's Printers and Publishers New Delhi.
- Lal J.B. 2011. *Forest ecology*, Natraj Publisher Dehradun.
- Mishra, S R. 2010. *Textbook of Dendrology*, Today & Tomorrow's Printers and Publishers New Delhi
- Patra, A K. 2013. *Agroforestry: Principles and Practices*, Today & Tomorrow's Printers and Publishers New Delhi.
- Pradeep Krishan. 2013. *Jungle trees of Central India*. Penguin Books India.
- Smith DM, Larson BC, Ketty MJ, and Ashton PMS. 1997. *The Practices of Silviculture- Applied Forest Ecology*. John Wiley & Sons.

Course Outcome:

1. Students will be expertise on the identification of forest tree species and growing stocks of forest and nursery establishment.
2. Student will be competent on tree species requirement under different site conditions.
3. Students will be acquainted to various tending operations for forest, stand management and manage growing stock of forest.

	PO								PSO

Weightage: 1-Sightly; 2-Moderately; 3-Strongly

PAPER II. FOREST BIOMETRY, SURVEYING & ENGINEERING

Cr.4 (3+1)

Course Objectives:

1. To acquaint students about tree measurements and forest Inventorization.
2. To develop skills for estimating the growing stock of forest using various tools and techniques.
3. To have the knowledge for conducting forest survey, and forest engineering aspects.

Theory

Measurement of tree parameters: girth, diameter, height and form factor. Estimation of log volume and volume of standing trees. Estimation of tree age, growth and yield of individual tree and forest stands. Stump analysis and stem analysis for determining past growth. Preparation of volume table, yield table, stand table & its application in forestry. Forest inventory, sampling methods adopted in forestry. Growth and yield prediction models and forecasting of future yield.

Forest surveying: Chain survey, plane table and compass survey. Forest Engineering: Building materials and its quality testing, Design and construction of forest roads and bridges.

Practical

Measurement of girth and diameter of plantation and forest, Determination of tree height and form factor, volume calculation of felled and standing trees. Estimation of tree age, Volume table preparation, Application of sampling procedures, Handling of GPS, preparation of yield and stand table.

Survey of forest and plantations using chain, plane table, compass, total station, measurement of road camber and road profile, Identification of building materials and its field testing, visit of different types of bridges.

Suggested Readings

Chaturvedi A N and Khanna L S. 1994. Forest Mensuration. International Book Distributor. Dehradun, India

Masani, NJ. 1995. Forest Engineering without tears, Natraj Publisher, Dehradun

Manikandan K and Prabhu S. 2012. Indian Forestry, Jain Brothers, New Delhi

Ram Parkash 1983. Forest Surveying. KhannaBandhu Book Publisher India.

Sharpe GW, Hendee CW & Sharpe WE. 1986. Introduction to Forestry. McGraw-Hill.

Simmons CE. 1980. A Manual of Forest Mensuration. Bishen Singh MahenderPalSingh, Dehradun.

Ram Parkash 1983. Forest Engineering. International Book Distributor, Dehradun, India.

Course Outcome:

1. Students will be able to demonstrate the use of common forestry equipments, calculate tree age and yield assessment of forest stand.
2. Students will be able to determine the growing stock of the forest and plantation.
3. Students will be well equipped for performing forest survey related activities.

Weightage: 1-Sightly; 2-Moderately; 3-Strongly

PAPER III: FOREST MANAGEMENT, REMOTE SENSING & GIS Cr.4 (3+1)

Course Objectives:

1. To enrich the students on forest management, and its functions productive, protective, recreation and bio-aesthetic value.
2. To provide knowledge on criteria and indicators for forest evaluation and site assessment.
3. To develop competency on remote sensing and GIS techniques for forest survey and management.

Theory

Principles of forest management and their applications. Development of forest management in India. Concept of Normality, Normal forest, Causes of abnormality in forest management Sustainable Forest Management, Rotation: Meaning and types. Increment, Types of increment, Yield: Types of yield, Yield regulation in regular forest, Yield regulation in irregular forest Management. Working circles, felling series, cutting section, coupes, periodic blocks and felling cycles. Silviculture system: Definition and types, Bamboo forest management and Working plan prescriptions. Site quality, Stand density, Criteria and Indicators.

Remote Sensing definition, scope, source of energy and interaction with forest, EMR Spectrum concept, Orbit, Platform and Sensor, Multi-band concept, Satellite system and its use for forest mapping and management. GIS definition, Hardware and software used, methods used in forest management, database and modeling concept. Imagery concept its interpretation and map

preparation, LiDAR and RADAR concept for forest. Application of RS & GIS for forest management and planning, forest covers type discrimination and change detection analysis.

Practical

Study of various records and forms maintained in Forest division with regard to management of forests under their control. Study of working plans of the forests. Toposheet reading, determination of scale and height on toposheets, introduction to different GIS software, conversion of file formats, image registration / geocoding, digitization, geo-referencing, Projection, File sub setting, mosaicing, unsupervised and supervised classification of forest, map preparation for forest cover, type, slope, LULC, fire, field visit for ground truthing.

Suggested Readings

Burrough PA.1990. *Principles of GIS for Land Resources Assessment*, Oxford & IBH Lilesand T.M.

Clarke, Keith. 2011. *Geographical Information System*, Prentice Hall.

Dwivedi A.P. 1993. *A Text Book of Silviculture*, International Book Distributors, Dehradun.

J.B.Lal.2011.*Forest Management: Classical Approach and Current Imperatives*, NatrajPublishers, Dehradun .

Franklin, Steven. 2014. *Remote Sensing for Sustainable Forest management*, CRC Press.

John Wiley.*Remote Sensing and its application*. Universities Press

Kohl, Michael 2012. *Sampling Methods, Remote Sensing and GIS Multisource Forest Inventory*, Springer publication.

Lillesand and Kiefer 2009.*Remote Sensing and Image Interpretation*, VI edition of John Wiley & Sons.

Lecture notes. 2000. *Photogrammetry and Remote Sensing*, module I, IIRS

Sen, Raj Kumar.2012. *Forest Management and Sustainable Development*,Today & Tomorrow's Printers and PublishersNew Delhi.

Course Outcome:

1. Student ability to perform forest evaluation based on criteria and indicators.
2. Students ability assessing forest productivity, increment and ecological aspects.
3. Students will be familiar on the use and procedure of remote Sensing and GIS and mapping using computer based software.

Weightage: 1-Sightly; 2-Moderately; 3-Strongly

PAPER IV. FOREST PROTECTION

Cr.4 (3+1)

Course Objectives:

1. To identify the degrading agents of forest, pest and diseases.
2. To understand the prevention control measures of diseases associated with trees
3. To learn about integrated pest management techniques for ecofriendly management of forests pendemics.

Theory

General concept of forest protection. Various abiotic and biotic forest damaging agencies. Forest fire and its impact on forest health. Adverse climatic factors, acid rains and air pollutants in relation to tree health. Tree disease concept and disease cycle. Biodegradation of wood - microscopic and chemical effects of white rot, brown rot, soft rot and wood discoloration. Heart rots - factors affecting heart rots, damage caused, compartmentalization of decay in trees and management of heart rots. Role of mycorrhiza in tree health. Important diseases of forest trees- Teak, Sal, Shisham, *Acacia*, *Dalbergia*, Deodar, Pines and *Casuarina*. Insect pest of Sal, Teak, Shisham, Babool, *Ailanthus*, Pines, Deodar, *Casuarina* and *Albizia*. Biological control of insect pests and diseases of forest trees Nature of disease resistance. Molecular tools for developing disease resistance trees.

Practical

Collection, identification and preservation of important insect pests and disease specimens of forest plants. Preparation of culture media and methods of inoculation. Vegetative and reproductive study of pathogens. Detection of insect infestation and seed borne mycoflora. Assessment of losses due to diseases, insect pests etc. Fire control methods and devices, Familiarization with the meteorological and plant protection equipment, Application of pesticides and bio- control agents in the management of insect pests, weeds, diseases in nurseries and plantations, Extraction of spores of Vascular arbuscular mycorrhizal (VAM), fungi from soil and assessment of mycorrhizal root infection,

Suggested Readings

- Bakshi BK. 1976. *Forest Pathology*. Controller of Publications, GOI.
- Jha LK & SenSarna PK. 1994. *Forest Entomology*. Ashish Publ. House.
- S SNegi, 2006. *Handbook of Forest Protection*. International Book Dist., Reprint
- Schmidt, Olaf. 2006. *Wood and Tree Fungi: Biology Damage Protection and Use*, Today & Tomorrow's Printers and Publishers, New Delhi.
- Paul. D. Mennan. 1991. *Tree Diseases Concept*. Prentice Hall.
- Stebbing EP. 1977. *Indian Forest Insects*. JKJain Bros.

Course Outcome:

1. Students will be able to identify the pest and diseases of nursery, plantations and forest trees
2. Perform the control measures for different type of pest and disease of the forest species.
3. Students gainhow to create healthy and disease free forests.

Paper V. FOREST ECOLOGY AND BIODIVERSITY CONSERVATION**Cr.4 (3+1)****Course Objectives:**

1. To understand the basic concept of ecology its components.
2. Acquire knowledge on biodiversity and its conservation methods
3. To understand the procedures analyzing biodiversity and perform diversity index using advance tools and techniques.

Theory

Forest ecology, forest community dynamics, forest community structure and function, phyto-geography and zoo-geographic regions of India, Basic concept of biodiversity, history of biodiversity conservation, Conservation of natural resources (Hotspot areas, Wildlife Sanctuaries, National parks, Biosphere reserve-terrestrial and aquatic, Botanical Gardens, Zoological Parks), Important Plant and wildlife ecological indicator species, endangered species, Coral reefs, Mangrove forest. Climate change and biodiversity, Global warming and forests, Green House Effect, Ozone depletion and its consequences, Biodiversity Conservation laws and acts. International programs for biodiversity conservation, Convention on Biological Diversity CBD, CITES UNFCCC Kyoto protocol, TRIPS, Ramsar convention, Intellectual property rights.

Practical

Study of forest community structure and its successional status, Estimation of productivity of forest ecosystem, Trip to different regions of the state to study forest vegetation, Collection and preservation of specimen, Identification of ecological indicator species, Methods of vegetation analysis, Measurement of biomass and productivity, Visit to National parks, Wildlife sanctuaries, Botanical gardens and arboreta.

Suggested Readings

Anonymous. 2006. *Report of the National Forest Commission*. Govt. of India.

Kumar Arvind. 2005. *Biodiversity and Conservation*, Today & Tomorrow's Printers and Publishers New Delhi.

Dhyani SN. 1994. *Wildlife Management*, Rawat Publ.

Malik, Ashok. 2008. *Dynamics of Forest Ecosystems*, Today & Tomorrow's Printers and Publishers New Delhi.

Huxley P. 1999. *Tropical Agroforestry*, Blackwell.

Khan TI & Al-Azmi DN. 1999. *Global Biodiversity Conservation Measures*, Pointer Publ.

Kimmins JP. 1976. *Forestry Ecology*, Macmillan.

Nautiyal S & Koul AK. 1999. *Forest Biodiversity and its Conservation Practices in India*, Oriental Enterprises New Delhi .

Ramakrishnan PS. 1992. *Shifting Agriculture and Sustainable Development*. Man and Biosphere Series, The Parthenon Publ. Group.

Singh, M P et al .2013. *Conservation of Biodiversity and Natural Resources*. Today & Tomorrow's Printers and Publishers New Delhi.

Course Outcome:

1. Student will be able to identify different component of ecosystem and its relation with each other.
2. Students will develop competency on forest biodiversity survey and calculation of different indexes
3. Students will know about the different national and international agencies related to floral and faunal biodiversity conservation.

Weightage: 1-Slightly; 2-Moderately; 3-Strongly

PAPER VI. FOREST POLICY, LAWS AND ENVIRONMENTAL LEGISLATION

Cr.4 (3+1)

Course Objectives:

1. To develop understanding about the forest policies and laws governing forest conservation
2. Awareness on the environmental legislations safeguarding the nature and its components.

- To develop knowledge on biodiversity acts and forest rights to explore the forest resources.

Theory

Forest policy -Relevance and scope, National Forest Policy-1894, 1952 and 1988, criminal laws, Indian Penal Code, criminal procedure code; Indian Forest Act-1927, Forest Conservation Act 1980, Biodiversity Act 2002, Forest Right Act2006-Privilege concession and Right of forest dwellers, Environment and their legal issues in India, Legal and policy frameworks related to forest conservation, Environment (protection) act 1986.

Practical

Visit to High Court, Lower Court. Visit to forest depot. Visit and study about crime cell of forest department

Suggested Readings

Chaturvedi A.N 2011.*Forest Policy and law*, Khanna Bandhu.

Indian Forest Acts (with short notes) 1975. Allahabad Law Agency.

Jha LK. 1994. *Analysis and Appraisal of India's Forest Policy*. AshishPub!.House.

Poddar A.K. et al. 2011.*Forest Laws and Plicies in India*, Today and Tomarrow Printers and Publishers New Delhi

Prabhakar V.K., 2001. *Laws on Forests* ,Anmol Publication.

National Forest Policy 1952.Ministry of Food and Agriculture, New Delhi.

National Forest Policy 1988.Ministry of Environment and Forests, New Delhi.

Saharia, VB. 1989. *Wildlife Law in India*. Natraj Publ.

Sairam Bhat 2010. *Natural Resources Conservation Law*, Sage.

Negi SS. 1985. *Forest Law*. Natraj Publ.

Course Outcome:

- Students will be able to understand about forest and legal rights.
- Acquainted with the provisions of forest laws and policies.
- Students understand the biodiversity boards and its working procedures.

SEMESTER-II

PAPER I. FOREST TREE IMPROVEMENT AND BIOTECHNOLOGY

CR.4 (3+1)

Course Objectives:

1. To acquaint the students about general principles of tree breeding for important tree species.
2. To understand the seed orchards, Clonal orchards, seed production areas, plus trees, etc.
3. To acquire the knowledge of biotechnological tools for genetic diversity improvement and protection.

Theory

General concept of forest tree breeding, tree improvement and forest genetics. Reproduction in forest trees, dimorphism pollination mechanisms. Pollen dispersion distances, pollinators and their energetics. Attractants for pollinators. Pollen handling forced flowering for seed orchard manipulation. Pollination mechanisms. A Variation in trees importance and its causes. Natural variation as a basis for tree improvement. Geographic variations - Ecotypes, clines, races and land races. Seed, seed formation, dispersal, storage, stratification and seed dormancy. Selective breeding methods- mass, family, within family, family plus within family. Plus tree selection for wood quality. Progeny and clone testing. Seed orchards - type, functions and importance. Estimating genetic parameters and genetic gain. Heterosis breeding: inbreeding and hybrid vigour. Manifestation and fixation of heterosis. Species and racial hybridization. Indian examples - Teak, Sal, Shisham, *Eucalypts*, *Acacias*, Pines and Poplars. Polyploidy, aneuploidy and haploidy in soft and hardwood species. Induction of polyploidy. Hardy-weinberg law, null hypothesis, Wohlund's Principle.

Biotechnology in tree improvement Mutation breeding. Tissue Culture, Micro-propagation, Genetic engineering, Transgenic plants, Molecular marker and its application in forestry.

Practical

Floral biology, modes of reproduction and modes of pollination in forest trees. Estimating pollen viability. Controlled pollination and pollen handling. Manipulation of flowering through hormones. Identification of ecotypes, races, and land-races in natural forest. Visit to species, provenance and progeny trials. Selection of superior phenotypes. Marking of candidate trees, plus trees and elite trees. Visit to seed orchards. Comparison of parents and their putative hybrids. Induction of polyploidy through colchicines treatment.

Suggested Readings

Khan IM. 2014 Forest Biotechnology, Today and Tomorrow Printers and Publishers New Delhi.

- Mandai AK & Gibson GL. (Eds). 1997. *Forest Genetics and Tree Breeding*. CBS.
- Surendran C, Sehgal RN & Paramathma M. 2003. *Text Book of Forest Tree Breeding*. ICAR Publ.
- P. Shanmughavel, 2004. *Tree Improvement and Biotechnology*, Pointer.
- Russel Haines, 1996. *Biotechnology in Forest Tree Improvement with Special Reference to Developing Countries*. Reprint, Dehradun.
- White J.W. 1976. *Introduction to Forest Genetics*. Academic Press.
- Zobel BJ & Talber J. 1984. *Applied Forest Tree Improvement*. John Wiley & Sons.

Course Outcome:

1. Ability able to identify the source of variation in tree species.
2. Student perform survey for quality assessment of plus tree, seed orchard, and clones.
3. The students will be enabled to establish SPA, Cos for sustain seed supply.

CO	PO								PSO		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PSO1	PSO2	PSO3

Weightage: 1-Sightly; 2-Moderately; 3-Strongly

PAPER II. FOREST INDUSTRIES AND WOOD TECHNOLOGY CR.4 (3+1)

Course Objectives:

1. To acquaint the students with the wood identification bases on physical, microscopic examination and mechanical characteristics of wood.
2. To have competence on the forest-based industries and product marketing.
3. To acquire knowledge on effective uses of wood of some important trees.

Theory

Wood formation, kinds of wood, wood properties: physical, mechanical, acoustic and electrical properties, Wood strength, Wood moisture, Wood seasoning, defects and wood preservation. Wood machining and wood working. Concept and principle of Smart furniture, application of nano-science in wood industries. Importance of forest based industries in Indian economy, resin, tannin, gums extraction, resources of essential oil, katha and cutch, dyes and pigments.

Wood based industries: paper and pulp, match, sport goods, plywood, matchwood industries, improved wood, engineered wood, composite wood. Wood certification.

Practical

Determination of wood density, wood bulking, wood moisture, identification of wood samples, wood defects, determination of wood strength, Effectiveness of wood preservatives, Grading of

wood, wood based industries, improved wood and composite wood. Extraction of essential oil, tannin, gums and natural dyes. Grading of plywood, visit of forest based industries, sawmill, timber marts.

Suggested Reading:

Chauhan Laxmi and Vijendra Rao. 2003. Wood anatomy of Legumes of India: their identification, properties and uses. Bisen Singh and Mahendra Pal Singh, Dehradun.

Eiri Board 2011. Modern Technology of wood, veneer, plywood, particle board, fibre board, bamboo and forest products. Engineers India Research Institute, India

Negi SS. 1997. Wood Science and Technology. International book distributor, Dehradun.

Rao KR and Juneja KBS, 1992. Field identification of 50 important timbers of India, ICFRE Publication, Dehradun, India

Sharma LC. 1977. Development of Forests and forest based industries. Bisen Singh and Mahendra Pal Singh Dehradun, India

Terry Porter 2006. Wood: Identification and use. Guilds of Master Craftsman Publication.

Tewari, D.N. 2008. Management of non-timber forest resource of India. International Book Distributor Company, Lucknow, India

Trotter H. 1992. Manual of Indian forest Utilization. Forest Research Institute, Dehradun.

Tsoumis G. 2009. Science and Technology of Wood. VerlagKessel

Troup RS. 2007. Manual of Indian forest utilization. Today and Tomorrow Printers and Publishers, New Delhi

Course Outcome:

1. Students develop competency in identifying the wood based on their properties and features.
2. The students will develop employability to different forest based industries.
3. Develop knowledge on different grades, preservation techniques, wood working, tools.

CO	PO								PSO		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PSO1	PSO2	PSO3
CO1	3	3	2	1	1	1	3	3	3	3	2
CO2	3	3	2	1	1	1	3	3	3	3	2
CO3	3	3	2	1	1	1	3	3	3	3	2

Weightage: 1-Sightly; 2-Moderately; 3-Strongly

Course Objectives:

1. To understand the animal behavior and their habitats for management.
2. To know the various conservation methods of wildlife for assessing the biodiversity.
3. Prepare students for wildlife census and wildlife management.

Theory

Introduction/Conservation ethics- Definitions, Values, Zoological classification, Sign and symptoms. Animals behavior & adaptations, Wild life Ecology, Basic concepts, Wildlife habits and habitat. Wildlife habitat and its component Wildlife conservation: Definition, Concept, significance. Wildlife conservation movement, Wildlife conservation in India, In-situ and Ex-situ wildlife conservation, Role of protected area in wildlife conservation, some rare and threatened wildlife species of world particularly India, special project for endangered species, Project tiger, GirLion Project, Crocodile Breeding Project, Wildlife Conservation organization- National and International. Role of zoos parks and sanctuaries for conservation of wildlife. Ramsar wetlands. Wild life management: Wild life management its scope as a natural resource, current status of wildlife management. Tiger, Bear, Elephant, Rhinoceros, deer. Biological basis of management- animal population, shelter, food, WL Policy Legislation and administration policies and programmes, Wild life protection act 1972, Scheduled animals, Age and Sex determination, Tiger census, Preservation of biological material, National Park and Sanctuaries of (C.G). Biotelemetry, Forensic Analysis, Wildlife pathology, wildlife crimes.

Practical

Study of mammals birds and animals in university premises, Identification of pugmark, evaluation of Roosting cover in university premises, Plotting of National Park and Sanctuaries on map. Visit and list the wildlife present in nearby zoo, sanctuaries, National Park.

Suggested Readings

- Agarwal, K.G.,2000.*Wildlife of India: Conservation and management*, Nidi Publishers India.
- Gopal Rajesh.,1993.*Fundamentals of wildlife management*, Justice Home Publication, Allahabad.
- Hosetti B.B, 1997. *Concept of Wildlife management*, Daya Publishing House, Delhi.
- James, A. 1984 *Principles of wildlife management*, Inc. Bailey, John Wiley & Sons,New York.

PAPER IV. FOREST SOIL AND WATERSHED MANAGEMENT CR.4 (3+1)

Course Objectives:

1. To understand and analyze different properties of forest soils and management of fertility and productivity.
2. To learn about the problems associated with tropical forest soils and their management.
3. To understand the concept of watershed and sustainable approaches for watershed management for improving the forest health.

Theory

Definition and importance of forest soils; Origin, classification and nomenclature of soils; forest soil physical, chemical and microbiological properties, Soils of major forest biomes, Difference between forest soil and other arable soils, understanding of soil dynamics and influence upon forest composition stand regeneration, tree vigor and tree growth, Silviculture practices and forest soils. Soil factors in forest productivity, Forest soil fertility determination, nutrient management in forest soil. nursery soil management. Soil degradation-problems and impact on forest ecosystems; Forest fire and soil resilience; Forest soil pollution, maintenance and improvement of forest soil with special reference to tropical conditions. Watershed basic concept, social aspects of watershed management, watershed management practices, sustainable watershed approach, integrated watershed management, use of modern techniques in watershed management,

Practical

Determination of soil moisture, texture, porosity, bulk density, particle density and water holding capacity; Determination of pH, EC, organic C &N, Study of forest soil profile in field, : Studies on fertilizers, biofertilizres and FYM uses in forest nursery, studies on drainage maps, characterization and delineation of watersheds, visits to nearby forest nursery and watershed areas.

Suggested Readings:

- A K Mani; R Santhi and K M Sellamuthu, 2008.*Fundamentals of Forest Soils*, Satish Serial Pub.
- Dhuruva Narayana, V.V., Sastry, G. and Patnaik, V.S. 1990. *Watershed management*.ICAR Publication, New Delhi.

- S.A: Wilde 1995.*Forest Soils and Forest Growth, Periodicals* Express Book Agency, New Delhi, International Book Distributors, Dehradun.

Course Outcome:

1. The student will acquire sound knowledge on the physico-chemical and biological properties of forest soils.
2. The students will be able to run different instruments used in soil analysis of forest soils.
3. The students will be enabled preparing watershed map and management plan.

PAPER V. GLOBAL ENVIRONMENT & CLIMATE CHANGE

CR.4 (3+1)

Course Objectives:

1. To develop understanding of the environment and environmental pollutions.
2. To aware the forest functions on global warming and environmental pollutions.
3. To acquire knowledge on national and international treaties, and agencies engaged in

climate change.

Theory

Environment: Definitions and concepts of environment components of atmosphere, hydrosphere, lithosphere, biosphere and their interactions. Biogeochemical cycle of green house gases, source and sinks.

Environment Pollution: Types of pollutions, methods of measurement of pollution, classification of pollutants, national and international Environmental standards of important pollutants.

Air pollution : Major pollutants and their sources. Ionizing radiation, monitoring of gaseous pollutants and particulate matter, Vehicular pollution. Biological abatement of air pollution. Development of green belt.

Water Pollution : Important pollutants source, impact of heavy metals, halogen and radio nuclides on aquatic flora and fauna. Treatment technologies for industrial effluents/wastewater. Monitoring water pollution and water quality standards.

Soil pollution: Heavy metal toxicity in soil, Impact of pesticides, industrial waste and fertilizers on soil physicochemical properties. Microbiological degradation of xenobiotics in environment.

Climate changes: Earth climate systems, adaptability and vulnerability. A global perspective of climate change, global warming, green house gases, IPCC initiatives in climate change mitigation, various mitigation mechanism- Kyoto protocol- strategies. Impact of climate changes on Indian forest, adaptation of forest trees to climate change, case studies on the management of certain tree species in India.

Global Environmental Problems: acid rain, Eutrophication, Biomanipulation, Ozone depletion and UV radiation. Bioremediation of contaminated soils and waste lands. Environment Impact Assessment.

Practical

Impact of particulate matter on environment, Impact of coal mining on environment Impact of cement pollution in environment. Effect of effluent from several industries on environment. Reclamation of mining wastes with microorganisms. Bio-accumulation studies on metals by microorganisms. Assessment of environmental impact on polluted sites. Assessing the awareness of environmental regulation and control methods, Impact of power stations on plant, microorganisms, animals and soils ecosystems, EIA of polluted river ecosystem, Environmental Impact Assessment.

Suggested Readings

Anonymous .2006.*Report of the National Forest Commission*. Govt. of India, New Delhi.

E. Claussen, V. A. Cochran, and D. P. Davis. 2001. *Climate Change: Science, Strategies, & Solutions*, University of Michigan.

Huxley P. 1999. *Tropical Agroforestry*. Blackwell Science.

Koskela J, Buck A & Teissier du Cros E. 2007.*Climate Change and Forest Genetic Diversity: Implications for Sustainable Forest Management in Europe*. Biodiversity International; Rome, Italy.

Strategies and Solutions. Pew Centre on Global Climate Change, USA.

Streck, C et al, 2006 Climate Change and Forests Emerging Policy and Market Opportunities Today & Tomorrow's Printers and Publishers New Delhi.

Course Outcome:

1. Students will be able to analyze and assess the pollutions and their sources.
2. Students understand on the role of forest on pollution control.
3. Students will be able to EIA for various agencies and know about the international and national organizations treaties.

Weightage: 1-Sightly; 2-Moderately; 3-Strongly

PAPER VI.FOREST STATISTICS & RESEARCH METHODOLOGY CR.4 (3+1)

Course Objectives:

1. To learn about bio statistics, experimental designs for the forest based experiment
2. To develop understanding of the data handing, tabulation and graphical representation
3. To learn the uses of different statistical software.

Theory

Basics of statistics: Scales of measurement, types of data: quantitative and qualitative data of forest tree species frequency arrangement, different series and its arrangement and representation methods, Central tendency: Mean, Median, Mode, Measures of Dispersion: Range, quartile deviation, Mean deviation and Standard deviation- variance, covariance, Basic concept of probability, Correlation: Concept, Karl Pearson's coefficient, Spearman rank correlation coefficient, Regression: Regression equations, linear and nonlinear regressions and regression coefficient. Tests of significance: t- test, paired t-test, Z- test and χ^2 -test

Analysis of Variance (ANOVA) - one way and two way analysis of variance, Experiments designs: Basic concept, Principles of experimental designs, Completely Randomized Design (CRD), Randomized Block Design (RBD), Latin Square Design (LSD), Split Plot and Strip Plot Designs, Comparisons of all experimental designs

Practical

Use of Excel sheet: To arrange forest based statistical data and represent in different diagram and

graphical ways, Forest based measurements: arrangements and frequency distribution, Calculation of mean, median and mode of measured characteristics of different tree species, Finding out the relationship between the height and DBH of some forest tree species-correlations and regressions, Testing the hypothesis under t- test,z- test and χ^2 -test,

ANOVA under the different types of designs: Completely Randomized Block Design, Randomized Block Design, Latin Square Design

Suggested Readings

Forestry Statistics India-1996 : Indian Council of Forestry Research and Education, 1999

Mead R & Relay J. 1987. *Statistical Tools for Agro-Forestry Research - Bivariate Analysis for intercropping Experiments*. ICRAF, Nairobi.

Surendran C, Sehgal RN &Paramathma M. *Statistical Methods for Agricultural Workers*.ICAR.2003.

R. Rangaswamy: A Text Book of Agricultural Statistics, New Age International Pvt Ltd Publisher, ISBN-9788122425925, 9788122425925

Dr. S R S Chandel: A handbook of Agricultural Statistics, IMPECT PUBLISHER

Course Outcome:

1. Student knowledge on the layout experimental designs.
2. Develop competency for data handling, graphical designing and test of experimental data statistically.
3. Students will be expertise on different statistical packages used for data analysis

SEMESTER- III

SPECIALIZATIONS

A. FOREST MANAGEMENT

B. FOREST GENETIC RESOURCES

A. FOREST MANAGEMNET

PAPER I. FOREST RESOURCE ANALYSIS

CR.4 (3+1)

Course Objectives:

1. To have knowledge of major forest products and raw materials derived from forest and their value addition and industrial uses.
2. To know about minor forest produce for local people livelihood.
3. To be able to manage the productivity of forest for future forestry and sustainable development.

Theory

Forest resources: wood produce and non-wood produce. Raw materials of forest origin for industries viz: paper and pulp; plywood and board, saw mills, furniture making, packing case, match splints, toys etc.

Minor forest products: edible products, fodder trees, shrub and grasses. bamboo and cane, medicinal and aromatic plants, oil seeds, gum & resins, fiber and flosses, spices and miscellaneous products e.g. Katha, latex, insecticides, soap nuts, etc. Animal products from forest - lac, honey, silk, fur, skins, tusks etc. Dependency of villagers/ tribal on forest resources for different livelihood options. Nature, scope and importance of forest resources in regional & national economy, nature, role and functions of forest based industries, reasons for resource degradation. Causes of low productivity of forest resources, remedial strategies, Trends in the production of important forest resources (wood and non-wood products). Government policies on forest resources. Approaches to achievements under five year plans. Management strategies for improved production and consumption of forest resources.

Practical

Identification, nature and properties of different wood and non-wood forest resources. Techniques & methods of value addition to forest resources for other upgradation. Exercise for forest resource mapping and analysis.

Suggested Readings

Agricultural Production and Resource Use. Oxford Univ. Press.

Bamoul W J & Oates WE. 1975. *The Theory of Environmental Policy*.

Tewari, D D. 2008 *Management of Non Timber Forest Product Resources of India: An Analysis of Forest Development Corporations*

Upton M *Forest Economics - Principles and Applications*. Natraj Publ.. 1976.

Course Outcome:

1. Students will acquire the knowledge of the major and minor forest resources and forest based industries.
2. Students will have the knowledge to assess the relationship between material produced and their utilization pattern.
3. Develop strategies for improvement in production process and new product development procedures.

PAPER II. PRODUCTION MANAGEMENT IN NURSERY AND PLANTATION FORESTRY

CR.4 (3+1)

Course Objectives:

1. To develop knowledge of the principles of production management and its application in forestry.
2. To be skilled on financial aspects involved during nursery production and plantation activities.
3. To learn about the marketing skills required for selling of nursery products.

Theory

Introduction to production theory, Production basic concepts, Resource-Product Relationship, Types and Kinds of Production Functions, Principles of production analysis, theory of demand and supply, theory of production cost analysis, Managing risk and uncertainty in nursery and plantation forestry.

Planning and budgeting techniques applied in nursery production and plantation forestry. Record book keeping system. Income and cash flow analysis. Principles of financial analysis, Investment analysis in plantation forestry, Determination of optimum rotation period. Market structure, Functions, Channels, Marketing efficiency and marketing problems of nursery and plantation forestry.

Practical

Exercises on production analysis, assessment of efficient production, Exercises on financial analysis of production, studies of marketing channels of different nursery and plantation crops and products, costs, margin and price spread for different nursery and plantation crops.

Suggested Readings.

Busby RJN.1981.*Investment Appraisal in Forestry*. Forestry Commission Research Station, Surveys.

FAO 1986.*Guidelines to Project Evaluation*. Natraj Publ.

FAO. 1981. Tropical Forest Resources Assessment Project (The Framework of Gems). *Forest Resources of Tropical Africa*. Part 1 &II. *Regional Synthesis*.

Natural Resource Economies- Theory and Application in India. Oxford &IBH.

Makchau JP & Malcolm LR. 1986. *Economics of Tropical Farm Management*. Cambridge Univ. Press.

Course Outcome:

1. Students will be compatible to develop commercial nursery and efficient in choosing salable products.
2. Students understanding on financial management establishing and managing nursery production.
3. Students will have expertise on marketing strategy and solving the issues related to nursery production and plantation forestry.

CO	PO								PSO

PAPER III. FINANCE AND MARKETING MANAGEMENT OF FOREST RESOURCES

CR.4 (3+1)

Course Objectives:

1. To develop understanding of financing and budgeting of the forest based industries.
2. To acquire knowledge of marketing channels, online marketing for the products and product promotion
3. To aware students on working capital, project proposal for bank financing, intellectual property rights of the forest resources

Theory:

Finance and financial management: aims and objective with reference to forest based resources; Sources of long term finance, Major Sources of funding and financing to the forest sector, Organization of finance in forest based industries

Concept of Working capital: Gross and net working capital, sources of working capital, factors influencing working capital of forest based industries.

Financial statements: importance and preparation, Balance sheet preparation of forest based industries with reference to profit and loss accounts.

Budget: Purpose and essentials of budgeting, important components of budget, preparation of budgets.

Challenges in Forest finance, Collaborative Partnership on Forests

Market- Classification, price determination under different market situation, demand and supply and factors affecting the market. Marketing efficiency-measurement methods, Marketing cost, margin and price spread-concepts and applications types of market integration. Marketing and trading of wood and non-wood forest products. IPRs and their implications in forestry.

Practical

Working capital analysis of forest based industries. Balance sheet preparation of forest based product industries; field and local area visit and its classification under different types of market, Price determination of any forest products under the different market situation, Demand and supply elasticity measurements of forest produces, Measurement of marketing efficiency, Marketing and trade of national and international timber and non timber forest products.

Suggested Readings

- Sharma LC. 1980. *Forest Economics -Principles and Applications*; Natraj Publ.
- W.A. Lauscher, *Introduction to forest Resource Economics*.
- FAO. 2019. Forest finance

Course Outcome:

1. Students will be able to prepare balance sheet for the forest based firm.
2. Students will be able to estimate working capital for the organization with marketing efficiency.
3. Students will have an idea on the importance and needs of Intellectual property rights.

CO	PO								PSO

PAPER IV. TREE BUSINESS MANAGEMENT

CR.4 (3+1)

Course Objectives:

1. To develop understanding skills in tree farming applying business principles.
2. To make project proposal of different plantation, nursery and budgeting and planning.
3. To understand the tree business sciences for higher income and productivity.

Theory

Tree farm: definition, concept, components and potential in uplifting the farmer's economy. Current farm scenario in India, constraints and the impact of climate change, Farm types and system of tree farming. Tree business management principles, Law of diminishing return, decision making, cost

and price principle, Depreciation, Compounding, Planning and budgeting of tree and plantation. Labour efficiency measures, Management of tree based farms: technical and financial components of forest Nursery, plantations, sericulture, agroforestry, lac culture and other commercial plantations.

Practical

Visit of tree plantation, agriculture farm, agroforestry fields, Calculation of fertilizer and compost mixture for different plantations, Farm budgeting, Calculation of depreciation of farm machinery, calculation of cost of production, Preparation of farm record and ledger file. Farm tools and working principles, Visit of sericulture plantation and processing center.

Suggested reading:

FAO 1986.Guideline to project evaluation. Natraj Publication, India.

Joshi SS and Kapoor TR. 2001.Fundamental of Farm Business Management, Kalyani Publication, India.

Ken JM, Morothia DK, Singh K, Ramashwamy C and Bentley WR. 1997. Natural Resource Economics: theory and application in India. Oxford and IBH publication.

Nautiyal JC. 1988. Forest Economics: Principle and application. Natraj Publisher, India

Panda SC. 2011. Farm Management and agricultural marketing. Kalyani Publishers.

Course Outcome:

1. Student competence on tree based proposal formulation for forestry enterprises.
2. Students will know about budgeting and planning.
3. Acquire knowledge on business attributes and efficiency measures.

PAPER V: SUSTAINABLE FOREST MANAGEMENT IN CHANGING WORLD

CR.4 (3+1)

Course Objectives:

1. To develop understanding on the sustainability components for forest resources management.
2. To shape out students for assessing role of local community for protecting biodiversity and livelihood.
3. To aware about the organizations involved in forest resources conservation and mitigating climate change

Theory

Sustainable Forest Management-concept, principles, origin and challenges, sustainable forest management principles. The Montreal Process, Criteria and Indicators of Sustainable Forest Management

Management of Common Property Resources (CPRs) and open access resources, The role of indigenous and local communities on forest management and sustainable livelihood strategies, Sustainable Fuel wood, Sustainable NTFP management, Forests in rural development, forest societies, social and cultural factors of forest management, Forest rights of people.

Micro-level planning and participatory rural appraisal. Techniques of PRA and RRA, role of NGOs and other community based organizations in forest management. Gender dimension of forest management. Ecotourism: sustainable tourism and people's participation.

Global environmental challenges and issues, Carbon credit, CIFOR, REDD, REDD+ Payments for environmental services. National strategies and action plans for SFM, CAMPA, JFM, ASSISTANT NATURAL REGENERATION, National Green Tribunal.

SFM in protected forest area, Wildlife and human conflicts, Community participation in wildlife management; International programs for biodiversity conservation, Convention on Biological Diversity (CBD), CITES, ITTA, IUCN, WWF, UNFCCC, Kyoto Protocol, TRIPS, (IPR) Intellectual Property Right and bio resource patenting.

Practical

Practice of Participatory Rural Appraisal technique. Preparation of micro plan for sustainable forest management. Resource survey and preparation of resource map. Exercise on designing training program for sustainable forest management. How to prepare leaflets and pamphlets.

Suggested Readings

Anonymous .2006.*Report of the National Forest Commission*. Govt. of India, New Delhi.

PAPER: VI. Urban Forestry

CR.- 2

Course Objectives:

1. To provide understanding for management, care and planting of trees in the urban areas.
2. To understand the role and needs of tree plantation in urban areas
3. To have knowledge on the tree species for urban forestry

Theory:

Introduction, objective and scope of urban forestry, History of Urban Forestry/Distribution and Ownership of the Urban Forest Functions and Values of the Urban Forest Urban Forest Environment Tree Hazard Assessment and Management Street, roads and parks tree inventories and Valuation The Urban Wild land Interface, Species selection for Street Tree and Park Management: Planting, Tree Maintenance, Removals Urban Forestry Ordinances, biomass estimation for carbon stock assessment and mitigation of carbon footprint calculation. Report writings on different aspects of urban forestry for the improvement communication skills.

Suggested Readings

Forestry and forest resources edited by V.K. Prabhakar, Anmol Publication, New Delhi.
Urban and recreational forestry by S.S. Negi, International book distributors Dehradun.
Manual of forestry by S.S. Negi, Bishensingh, Mahendra pal singh, Dehradun.

Plantation Forestry by R.K. Luna

Course Outcome:

1. Students ability to suggest suitable tree species for different places of urban areas.
2. Students will be promoted for urban land scape manager and consultant for kitchen root gardening.
3. Students will be able to develop forest plantation, parks, gardens for urban dwellers health.

SEMESTER- III

B. FOREST GENETIC RESOURCES

PAPER I. BREEDING METHODS IN FOREST TREES

Cr.4 (3+1)

Course Objectives:

1. To acquaint the students about the concepts of genetics, breeding in forest species.
2. To provide knowledge of genetic testing and making designs of forest trees.
3. To learn about different tree breeding methods using modern tools and techniques.

Theory

Introduction to plant breeding, Genetic constitution of tree populations, half-sib, full-sib family in trees. Hardy- Weinberg equilibrium, changes in gene frequency through selection, migration, mutation.

population sizes. Long-term and short-term breeding populations. Genetic variation and Heritability, Selective breeding methods- mass, family, within family, family plus within family. Grading system of plus trees in natural stands and \plantations regression systems, mother tree selection, Selection for different traits. Clonal selection and hybridization. Genetic testing programs - mating designs, complete designs - nested designs, factorial, single pair mating, full diallel, half diallel and partial diallel, incomplete pedigree designs - open pollinated mating and polycross mating.

Experimental designs in genetic testing. Selection for disease resistance, mutation and polyploidy in plant breeding, Marker assisted selection. Breeding methods for wood quality, agroforestry, diseases and pest resistance, drought and salt resistance. Tree improvement case histories. Calculating gene and genotype frequencies. Flow chart for different breeding methods.

Practical

Half-sib, full-sib family in trees. Grading system of plus trees in natural stands. Mating

designs, complete designs - nested designs, factorial, single pair mating, full diallel, half diallel and partial diallel, incomplete pedigree designs - open pollinated mating and polycross mating. Selection for biotic and biotic stresses.

Suggested Readings

Zobel BJ, Wyk GV &Stahl P. 1987. *Growing Exotic Forests*.John Wiley & Sons.

Course Outcome:

1. The student will be enabled for carrying out selection of superior trees, disease resistant, drought resistant for breeding purposes and to produce the quality planting material.
2. Students will have knowledge on Genetic testing and process to get superior plant material for future forestry.
3. Students will know how to conduct breeding program in forest trees.

PAPER II. FOREST TREES REPRODUCTIVE BIOLOGY AND SEED ORCHARDS

CR.4 (3+1)

Course Objectives:

1. To impart the knowledge of reproduction biology in forest tree species.
2. Understanding the mechanism of breeding, sex expression, and seed orchard development.
3. To have knowledge of seed production areas, progeny testing in forest species

Theory

Importance and application of reproductive biology in tree breeding. Modes of reproduction: vegetative, asexual, sexual reproduction their breeding systems and sex expression. Monoecy, dioecy and its evolution. Out-crossing mechanism in forest trees. Environmental effects on sex expression. Floral biology. Initiation and development- Microsporogenesis, Megasporeogenesis, modes of pollination; Self and out-crossing. Fertilization in hardwood and softwood species. Embryo development, seed development, Seed dispersal and gene flow. Seed orchard need, establishment of seed orchard, hybrid and research seed orchard, selection and preparation of seed orchard site, isolation, orchard size, orchard design. Seed orchards – production and management, different types of seed orchards – SSO and CSO- merits and demerits. Progeny Pests and disease management. Seed production area- its production and management.

Practical

Sex expression in forest trees. Out crossing mechanisms in forest trees. Measurement of pollen flow in wind-pollinated and insect-pollinated species. Pollen viability and fertility. Seed dispersal mechanism. Visit and study of seed orchard design. Plant growth regulator application for flower induction. Study the Intraclonal variation in floral and seed characters

Course Outcome:

1. Students will be able to demonstrate the reproductive biology in different tree species.
2. Students enable to conduct genetic testing, progeny trials and defining variability functions.
3. Students will be able to establish and manage seed production areas, clonal seed orchards for quality seed production.

PAPER III. MOLECULAR GENETICS OF FOREST TREES CR.4 (3+1)

Course Objectives:

1. To impart the knowledge of DNA and genomic structure of forest trees with help of molecular marker.
2. To learn about the techniques used in molecular genetics of forest trees.
3. To acquire knowledge of gene mapping and Bioinformatics

Theory

Genome: Nuclear Genome, Mitochondria Genome, Chloroplast Genome and Evolution of the three Plant Genomes. Transcription and translation of forest tree Genes. DNA replication. Genetic code. Gene expression. Regulation of Gene Expression. DNA damage, repair and recombination.

Genetic diversity/Genetic variation of forest trees: causes and advantages. Genetic characterization of forest tree species. Morphological, Biochemical and Genetic markers. Molecular markers: Dominant and codominant, Types of molecular markers: advantages and disadvantages. Techniques in molecular genetics of forest trees: DNA isolation, DNA quantification, DNA restriction; Primer, gel electrophoresis; southern, northern and western blotting; nucleic acid hybridization; polymerase chain reaction, gene sequencing.

Polymorphism and its significance. Calculation of genetic diversity within and between forest tree populations. Molecular markers and genome mapping. Application of molecular markers in forest tree improvement. Genomics of wood formation. Molecular genetics of cellulose biosynthesis.

Associate mapping through molecular markers. Social issues in molecular genetics. Bioinformatics.

Practical

Estimation of genetic diversity between/among forest tree populations through Morphological markers. Preparation of solutions for DNA isolation, Electrophoresis and PCR standardization of protocols for DNA isolation of different forest tree species. Standardization of working protocol for RAPD, ISSR and AFLP analysis estimation of genetic diversity between/within forest tree population through molecular markers.

Sandeepkumar, Mathias Fladung. 2003. Molecular genetics and Breeding of forest trees. Food product press. An imprint of Hawarth press. Inc New York. London. Oxford.

Course Outcome:

1. Students will be able to demonstrate the genomic structure of forest trees.
2. Students will know the techniques of molecular genetics for application in forest trees.
3. Students will have an idea of bioinformatics tools used for characterizing forest trees at

genome level.

PAPER IV: QUANTITATIVE GENETICS OF FOREST TREES

CR 4(3+1)

Course Objectives:

1. To develop knowledge in quantitative analysis of genetic & phenotypic characteristics.
2. To gain knowledge of heritability and fitness of population in forest.
3. To know the estimation of genetic components of variance in forest trees

Theory

Back ground of quantitative genetics, extension of Mendelian genetics into quantitative genetics, Statistical parameters used in quantitative genetics, polygenic traits, Selection theory for a quantitative character. Fisher's fundamental theorem on natural selection and its implications. Multiple-factor-hypothesis. Mating systems in forest trees, Random mating consequences in small populations. Pedigree population and inbreeding, inbreeding coefficient, rate of inbreeding. Effect of inbreeding on mean and variance, Heterosis and causes for heterosis in F1 and later generations. Models of gene action, estimation of population mean, phenotypic value, breeding value, dominance deviation. G x E component of variance, interaction and environment deviation. Estimation of genetic components of variance through resemblance of relative's covariance. Heritability-its estimation and significance. Correlation characters- genetic and environmental correlations. Prediction of selection response: patterns, asymmetry, and causes. Selection criteria and use of information from relatives, response and indirect selection. Combining ability effects, Selection for combining ability. Threshold characters

Practical

Quantitative and qualitative character analysis in forest tree species.
Phenotypic, genotypic correlations and path analysis of forest trees.
Estimation of variance components from analyses of variance using various mating designs of forest trees.
Estimation of population mean, phenotypic value, and breeding value of a provenance.

Suggested Readings

Zobel BJ, Wyk GY & Stahl P. 1987. *Growing Exotic Forests*. John Wiley & Sons.

Course Outcome:

1. Students will be able to estimate the similarity and dissimilarity in the tree population and suggest suitable tree species in the different environment.
2. The students will be able to understand the fitness of individual and their relation with ancestry
3. Students will be able to assess the genetic variance which can help in tree improvement and tree breeding techniques.

PAPER V: FOREST GENETIC DIVERSITY, CONSERVATION & ENVIRONMENTAL IMPACT **CR**

4(3+1)

Course Objectives:

1. To provide the knowledge about the phenotypic and genetic diversity in forest species.
2. To understand biogeographic zones of India and plant distribution patterns.
3. To learn about the biodiversity and methodology of *in-situ* and *ex-situ* conservation methods

for genetic resource conservation of forest trees.

Theory

Forest biodiversity: concept, levels Values, Services and threats. Levels of Genetic Variation in Forest Trees. Characteristics of Forest Genetic Diversity, Ecotypes, Subspecies, Population, Metapopulation, Provenance, Land race, Cline. Dynamics of forest genetic diversity: Genetic erosion, Population bottleneck, Genetic drift, Selection, Migration and Mutation and induced genetic diversity in forest tree species. Diversity of biogeographic zones of India. Hotspots of forest genetic diversity. Forest Genetic resource mapping biodiversity indices, methodology of biodiversity conservation, Evolutionary mechanism of FGR due to Environmental Change. Some important threatened/endemic/critically endangered plants of India, Intellectual property rights. The Biological Diversity Act, 2002, Quarantine laws and FGR exchange. International initiatives in Biodiversity Conservation

Practical

Visits and survey of forests biodiversity within their natural habitat. Measurement of forest biological diversity. FGR analysis of Natural stands in nearby forest area.

PAPER: VI. Urban Forestry

CR.2

Course Objectives:

1. To provide understanding for management, care and planting of trees in the urban areas.
2. To understand the role and needs of tree plantation in urban areas.
3. To have knowledge on the tree species for urban forestry.

Theory:

Introduction, objective and scope of urban forestry, History of Urban Forestry/Distribution and Ownership of the Urban Forest Functions and Values of the Urban Forest Urban Forest Environment Tree Hazard Assessment and Management Street, roads and parks tree inventories and Valuation The Urban Wildland Interface, Species selection for Street Tree and Park Management: Planting, Tree Maintenance, Removals Urban Forestry Ordinances, biomass estimation for carbon stock assessment and mitigation of carbon footprint calculation. Report writing on different aspect for the improvement of communication skills.

SEMESTER- IV

FOREST MANAGEMENT

1. FIELD TRAINING (ATTACHMENT WITH STATE FOREST DEPARTMENT FOR UNDERSTANDING OF FOREST OPERATIONS AND MANAGEMENT PRACTICES CURRENTLY USED IN FOREST MANAGEMENT)

Course Objectives:

1. To apprise students with the field operations prevailing in forest department.
2. To know about the sustainable utilization and management of forest resources.
3. To know about the wildlife and biodiversity conservation methods adopted by forest department.

Visit to modern forest nurseries, herbal gardens and watersheds. To study the medicinal and aromatic plants diversity, their conservation and domestication. Study the felling and logging operations, timber lots and industrially important products. Introduction to Working Plan, data generation-enumeration and volume/yield calculation. Writing of compartment history files. Study the catchment area treatment plant and FDA. Study the Regeneration and Management of regionally important forestry tree species. Laying out sample plots, stump analysis, preparation of local volume table and use of forestry field equipments / instruments. Visit to National Parks, Sanctuaries and Bio-sphere reserves. Visit to ecologically degraded areas around cement plants, mined areas etc and study rehabilitation measures adopted. Visit to plantation site and data collection for its growth pattern and feasibility.

Course Outcome:

1. Student will get practical exposure on forest management, felling, wood depot management.
2. Student's skill on working plan preparation, forest survey for growing stock and sustainable forest management in forestry.
3. Students will know the habitat management in national parks and sanctuaries.

2. FOREST BASED INDUSTRIAL TRAINING

Course Objectives:

1. To make the students acquaint with the types of raw materials, processing techniques and product development for different forest product.
2. To know about the industrial utilization of wood, and other forest produces in various industries.
3. To provide practical exposure to forest based industries to cater the needs of skilled workforce and entrepreneurship.

Study the nature structure of Industrial Training and Business Organization: Raw material procurement and processing; Production, Marketing and Economics at Wood workshop and saw mills/wood seasoning and preservation treatment units/Pulp and Paper Industries/ Katha making industry/ Resin, Turpentine, Gums, Tendupatta, Chironji Industry; Herbal Pharmacies and other wood product industries.

Course Outcome:

1. Equip students with the different industrial techniques and instruments and product production.
2. Students will be able to develop expertise on marketing of products and cost benefit analysis.
3. Students will be able to initiate start up and work in forest based industries

Weightage: 1-Sightly; 2-Moderately; 3-Strongly

3. ICT TOOLS AND TECHNIQUES APPLICATION IN FOREST

Course Objectives:

1. To develop skill and training of ICT tools, data handing, statistical analysis.
2. To be able to use the ICT tools for mapping and measurements of forest.
3. To acquire knowledge on the online learning platforms

Introduction to MS Office (Word, Excel, Power Point).Introduction of Statistical, GIS &

plagiarisms softwares. Application of Remote sensing for forest resource measurements. Introduction to Multi-Media and its application. E-content survey consultation of scientific database concept of online learning platform (MOOCS, SWAYAM, NPTEL).

Course Outcome:

1. Students will be skilled with ICT tools and its applications.
2. Students will be able to explore online tools of forest working, graphical designing and data interpretation.
3. Students will enrich knowledge on mapping, statistical analyses, report writing.

4. DISSERTATION

Course Objectives:

1. To encourage for forestry research on problem solving approaches.
2. To survey the growing stock, wildlife and biodiversity of forest and industrial products and utilize in research planning and forest management.
3. To develop the skills of running laboratory instrument and research report and paper writing.

Field/laboratory based research work on different aspects of forestry, wildlife and environmental sciences

Course Outcome:

1. Students will gain knowledge on research topic identification, experimentation and data collection on different aspects of forestry.
2. Students will be able to develop hypothesis and its validation process for conducting research proposal.
3. Students will be able to write scientific articles and familiar with operating laboratory instrument.

SEMESTER- IV

SPECIALIZATION: FOREST GENETIC RESOURCES

1. FIELD TRAINING (ATTACHMENT WITH STATE FOREST DEPARTMENT FOR UNDERSTANDING OF FOREST OPERATIONS AND MANAGEMENT PRACTICES CURRENTLY USED IN FOREST MANAGEMENT)

Course Objectives:

1. To apprise the students with the field practices needed for the analysis of genetic resource
2. To know about the sustainable utilization and management of forest genetic resources.
3. To know about the biodiversity conservation methods for genetic resources adopted by forest department

Learn to make FGR Inventory. Analysis of Provenance Variation. Identification of self and cross pollinating forest trees and its genetic diversity pattern analysis. Genetic diversity status on the basis of morphological markers. Population wise conservation priority zones of specific forest tree species. Species wise adaptability in the natural forest stands. Identification of plus tree and elite tree zones in forest. Flowering and seeding pattern of forest. Seed dispersal pattern and its influence on forest genetic resources. Identification of species wise seed production areas. Clone, seed, pollen and specimen collection. Identifying the factors which are threat to forest genetic diversity. Characterization of Genetic Potential against changing climate. Forest regeneration status. Making plans for long term and short term tree improvement programs. Development of practical step guide to the in-situ conservation of FGR. Forest genetic resource management by forest department.

Course Outcome:

1. Student will be able to develop techniques for the sustainable utilization and analysis of genetic resources of forest.
2. Students will be skilled to adopt suitable forest management practices for genetic conservation.
3. Students will be able to conduct the in-situ conservation of Forest genetic resources and management strategies by forest department.

2. FOREST BASED INDUSTRIAL TRAINING

Course Objectives:

1. To make the students acquaint with the procurement of raw materials and processing techniques by industries.
2. To know about the best industrial utilization and financial and marketing management of the products needed for the forest based industries.
3. To provide knowledge on the scope of industries based on forest resources

Study the nature structure of Industrial Training and Business Organization: Raw material procurement and processing; Production, Marketing and Economics at Wood workshop and saw mills/wood seasoning and preservation treatment units/Pulp and Paper Industries/ Katha making industry/ Resin, Turpentine, Gums, Tendupatta, Chironji Industry; Herbal Pharmacies and other wood product industries.

Course Outcome:

1. Students will be trained and skilled in the latest industrial technique, forest based products.
2. Students will be able to apply sustainable management practices in forest based industries.
3. Students will be able to establish forest based industries

4. DISSERTATION

Course Objectives:

1. To encourage for forestry research on problem solving approaches.
2. To survey the growing stock, wildlife and biodiversity of forest and industrial products and utilize in research planning and forest management.
3. To develop the skills of running laboratory instrument and research report and paper writing.

Field/laboratory based research work on different aspects of forestry, wildlife and environmental sciences

Course Outcome:

1. Students will gain knowledge on research topic identification, experimentation and data collection on different aspects of forestry.
2. Students will be able to develop hypothesis and its validation process for conducting research proposal.
3. Students will be able to write scientific articles and familiar with operating laboratory instrument.
