Abstract

The pandemic COVID-19 is transformed our lives in every aspect. If talking about education, education has moved from the traditional classroom teaching method to the online learning method to avoid mass gatherings to hinder the prevalence of the virus. In this pandemic time when all are facing a lot of suffering a positive change has taken place which is the maximum use of digital technology in the teaching and learning process. This article focuses on digital transformation in education during the pandemic in India. In order to analyse the impact of the pandemic on use of technology and in-depth retrieval of user requirements this document builds a reasonable rating index system by collecting users' reviews on online education platforms before and after the COVID-19 outbreak. The coefficient of variation method was chosen to weight each index according to the difference of the index values. In addition a
