CEO, Co-Founder of
Forage

INTRODUCTION

- Software developers use their programming skills to create new software and improve existing software applications. They design and write the code used to build everything from operating systems to mobile apps to video games. Often, project managers provide software developers with an organization's business goals, and they translate those needs into software requirements.

- While you don't always need a degree to find a job in software development, earning one can help you build technical skills and open more job opportunities. As you research degree programs, consider those with an emphasis on development skills, like software engineering, computer science, or information technology.
