Title: Laboratory, numerical and analytical studies on geosynthetic encased columns

Dear Dr Balbir Kumar Pandey

We would like to thank you for reviewing for *Ground Improvement (Proceedings of the ICE)* and confirm that we have received your report for the above paper. Your review helps us evaluate submissions for quality and potential impact on future policy, supporting our mission to connect government, academia and industry.

Reviewer reward:

Each paper you review counts towards your ICE Continuing Professional Development (CPD). Reference ICE 3006A - Participating in Institution activities such as acting as a reviewer.

We operate an annual reviewer-reward system. During each calendar year, we calculate how many reviews each reviewer has undertaken and, depending on that number, offer promotions and discounts for our products.

Reviewers also gain privileged access to new research in the field. Finally, unless you ask to be omitted, we will thank you in the first issue of the following year.

ICE Publishing peer-review website has a quality mark for trusted reviewers. Reviews submitted to ICE Publishing journals can be rated

onscreen by the handling Panel / Board member.

We value the contribution you have made and hope that you will be able to review other papers for ICE journals in the future.

Yours sincerely,

Editorial Office

Ground Improvement (Proceedings of the ICE)
