### **1-Introduction**

The global economy has a significant shift towards digitalization and technology-driven processes.

The concept of a "digital economy" refers to an economy that is primarily based on digital technologies, data, and information. In this context, businesses are increasingly adopting digital solutions to enhance efficiency, improve customer experiences, and gain competitive advantages. India, with its burgeoning technological landscape and a vast pool of skilled professionals, is actively striving to build and participate in the digital economy. However, this transformation is not without its challenges, particularly concerning the transformation of traditional business processes.
