

A review on modeling and Simulation of Waste-to-Fuel Conversion Processes Using Aspen Software

A Mini Project Report

In Partial Fulfilment of the Requirement for Award of Degree of Bachelor of Technology of the 2nd Year in Chemical Engineering

Submitted By

Samprit De (23021129)

D. Hemant Kumar (23021110)

Tanisha Banjare(23021134)

Under the Guidance of

Dr Vishnu Prasad Yadav sir

Assistant Professor

**DEPARTMENT OF CHEMICAL ENGINEERING
SCHOOL OF STUDIES OF ENGINEERING & TECHNOLOGY
GURU GHASIDAS VISHWAVIDYALAYA, BILASPUR (C.G.)**

May 2025

CERTIFICATE

Certified that the Major Project Report entitled **Modeling and Simulation of Waste-to-Fuel Conversion Processes Using Aspen Software** submitted by **Samprit De, D.Hemant Kumar, Tanisha Banjare** of B.Tech. 4th Semester, in partial fulfillment of the requirements for the award of degree in Bachelor of Technology (B. Tech) in Chemical Engineering, is according to the students their own investigation carried out by them in the Department of Chemical Engineering, School of Studies of Engineering & Technology, GGV, during the session 2024-25.

Prof. Amit Jain
HoD

Department of Chemical Engineering
SoS of Engineering & Technology, GGV

Dr Vishnu Prasad Yadav sir

Table of contents

List of tables

List of figures

1. Introduction

2. Literature review

3. Transforming CO₂ emissions into dimethyl ether

3.1 Summary

3.2 Production Pathways for Dimethyl Ether

3.2.1 Direct Synthesis from Syngas:

3.2.2 Indirect Synthesis via Methanol Dehydration

3.2.3 Carbon Capture and Integration in DME Production

4. Methodology

4.1 CO₂ Capture Section

4.1.1 Flue Gas Inlet

4.1.2 Absorption Process

4.1.3 Rich MEA Handling

4.1.4 Regeneration

4.1.5 MEA Cooling & Recycle

4.1.6 Simulation Basis:

4.1.7 Operating Conditions of Flue Gas

4.1.8 MEA Stream Specifications

4.1.9 Performance Optimization:

4.2 Hydrogen Production via PEM Water Electrolysis

Purpose:

4.2.1 Electrolyzer Type

4.2.2 Process Setup

4.2.3 Reaction Conditions

5.1.1 Objective:

5.1.2 MEA-to-Flue Gas Ratio Impact:

5.1.3 Environmental Advantage

5.1.4 Reboiler Temperature Effect

5.1.5 Recommended Condition

5.1.6 Specific Energy Consumption

5.2 Methanol Synthesis and Purification Process

5.2.1 Objective

5.2.2 Effect of Pressure (60–80 bar)

5.2.3 Effect of Temperature (250–310 °C)

5.2.4 Methanol Purification

5.2.5 Trade-offs and Optimization

5.3 DME Synthesis and Purification Performance

5.3.1 Reaction Nature:

5.3.2 Optimal Temperature:

5.3.3 Pressure Selection:

5.3.4 Power Requirements

5.3.5 Reflux Ratio Impact

5.3.6 Distillation Setup

5.3.7 Efficiency Metrics

5.4 Sensitivity Analysis

5.4.1 Basis of Analysis:

5.4.2 Focus of Sensitivity Analysis:

5.4.3 Impact on Cost Parameters

5.4.4 Reason for Low Sensitivity of Methanol & DME

5.4.5 Relation Between Quantity and Cost Sensitivity

5.5 Energy Analysis and Efficiency Considerations
