ABSTRACT

This report encapsulates my internship experience at Codsoft, spanning from May 10, 2024, to June 10, 2024, where I engaged in a series of web development tasks designed to bolster my technical skills and practical knowledge. Over the course of the internship, I worked on five key projects: a calculator, a landing page, a personal portfolio, a quiz maker, and a job board. Each project involved the application of various technologies including HTML, CSS, JavaScript, MongoDB, and React, allowing me to gain comprehensive experience in both front-end and back-end development. The tasks were structured to cover essential aspects of web development, from designing user interfaces to managing server-side data, thus offering a well-rounded exposure to the field. This hands-on experience not only enhanced my problem-solving abilities but also provided valuable insights into real-world software development practices. Through this internship, I developed a deeper understanding of the software development lifecycle and improved my coding proficiency, preparing me for future challenges and opportunities in the web development industry.
