ABSTRACT:

This report documents the development of a comprehensive web-based solution that includes a landing page, portfolio, and calculator, created during an internship. The primary goal was to design and implement a user-friendly interface that effectively showcases content and provides interactive features. The project utilized modern web technologies, such as HTML, CSS, JavaScript, and React (or Angular), to achieve a responsive and dynamic user experience. Throughout the project, various challenges were encountered, including cross-browser compatibility, API integration, and performance optimization. The successful completion of the project demonstrates the importance of balancing aesthetic design with technical functionality in web development. The outcomes not only met the project's objectives but also provided valuable insights into the process of building and deploying web applications.
